

O & M Guide for Displays

Acrylic / Perspex®

For all general purpose cleaning, Perspex® should be washed with clean, cold water to which a little detergent has been added. The use of any solvents such as methylated spirits, turpentine, white spirit or any proprietary window cleaning products is neither necessary nor recommended.

The ideal procedure is to polish every one to two weeks using a 100% cotton cloth.

Stainless Steel

General Cleaning - Soap, detergent or dilute (1%) ammonia solution in warm clean water. Apply with a clean sponge, soft cloth or soft-fibrebrush then rinse in clean water and dry.

Fingerprints - Detergent and warm water, alternatively, hydrocarbon solvent.

Veneers and MFC

Cleaning should be carried out solely with a damp cloth and soft duster. Polishes/waxes must not be used as they may harm the finish.
